

Innovative Energy Savings Solutions

staplesenergy.com

WHAT OUR CLIENTS ARE SAYING

“ Staples Energy provided professional and efficient staff to complete the project in a timely fashion while affording our store the financial incentives to keep the costs in line with a realistic and workable payback timeline. Thank you, Staples Energy, for working with us to produce this positive outcome.”

– **Jeff Niebler**, Business Owner

“The entire team at Staples Energy acted in a professional manner, offering information, coordination and great communication from initial contact throughout the process for our entire [school] district.”

– **Erick Kroenke**, Director Maintenance & Operations,
Carlsbad Unified School District

“Through the various energy efficiency upgrades that Staples Energy performed, Wisconsin Lutheran High School will be saving approximately 145,903 kWh and \$16,049 annually. This is a big savings for a school of approximately 850 students.”

– **Dave Baacke**, Director of Operations,
Wisconsin Lutheran High School

“My walk-in coolers and freezers are much quieter now, and the lighting in my store is tremendous. It’s pretty awesome. We’ve been more than happy.”

– **Paul Roberts**, Owner of Roberts’
Specialty Meats

WEATHERIZATION PROGRAMS

Insufficient insulation and poorly sealed windows and doors lead to wasted money on home energy bills. Our Energy Specialists perform free energy assessments to determine where improvements could be made to a home's insulation and air sealing. Then our kind and courteous installation crews make the improvements, often on the same day.

By partnering with utility providers, we're often able to provide these services at little to no cost.

HEATING, VENTILATION AND AIR CONDITIONING (HVAC)

Improper air flow has a huge impact on the efficiency and expense of running your HVAC system. Our skilled, local technicians can inspect, repair, maintain, and install any make and model of heating and cooling equipment. We offer a wide range of services from maintenance to replacement.

SOLAR PANEL INSTALLATION

Staples Energy has been providing energy efficiency services to Californians for more than two decades. We're also your local source for solar panel installation. What makes us better? We begin with an energy assessment in order to locate and reduce wasted energy before fitting you with the right type and size solar installation.

Our goal is to help achieve maximum power production while taking advantage of all rebates, incentives or tax credits available. Ask us about financing options, too!

Staples Energy partners with California utility companies to promote energy savings programs to residential, commercial and public-sector customers. The goal is to generate maximum savings for both parties and utilize incentives made available to customers to help fund these projects. All parts and service are warranted.
